

My job title says Talent Acquisition — my work says developer. At [Ericsson](#) I identified friction in my own workflows and built the tools to fix them: a GUI-based document generator and a print automation CLI, both written in Python on my own initiative and used by me daily. My manager recognised the approach and has asked me to extend the concept for other team members. I also contribute to [DICE](#), an internal AI dashboard team, as a process and automation advisor. I have five years of context inside large tech organisations (Ericsson, Infineon, Bosch) — I understand what problems are worth solving and I build the tools to solve them. Now I want the title to match the work.

Projects & Built Tools

HR Contract Document Generator

PERSONAL · USED AT ERICSSON

A Python desktop application built on my own initiative to automate my own contract document workflow. A GUI collects the required data and auto-populates `{{token}}`-based templates, generating completed `.docx` and `.xls` files — replacing a fully manual process. My manager praised the result and has asked me to adapt the concept for other team members, which I am currently working on.

Print Automation CLI Tool

PERSONAL · USED AT ERICSSON

Built personally to eliminate repetitive manual steps in my daily print workflow. An interactive CMD interface guides the user through configurable print settings with input validation and error checking, then sends files to the network printing server with a real-time progress bar. Written entirely on my own initiative to solve a friction point in my day-to-day work.

DICE — AI Dashboard Team ERICSSON · ACTIVE

Contributing as an outside process consultant to DICE, an internal Ericsson team that delivers business intelligence dashboards powered by Native AI. Analyse existing workflows, identify automation opportunities, and advise on team organisation and process design to help the team ship faster and more reliably. Involvement is manager-supported and cross-functional — working alongside engineers and product stakeholders outside my primary role.

Professional Experience

Talent Acquisition Operations Partner

Apr 2025 – Present

Ericsson · Budapest

- Built Python tools on personal initiative to automate own document generation and print workflows — manager recognised the approach and asked me to extend it for other team members
- Automated recruitment data pipelines and reporting workflows, reducing manual processing time
- Applied conversion-rate analytics (Source of Hire, pipeline velocity) to optimise talent sourcing ROI
- Led cross-functional hiring initiatives and KPI reporting to senior management

- Digitised and automated candidate experience processes, reducing manual data handling across the team
- Analysed recruitment-channel ROI metrics and presented structured findings to management
- Built and maintained a structured talent pipeline database using data-driven methods

- Applied Lean HR methodology to simplify and digitalise existing HR processes
- Analysed employee satisfaction data and developed action plans to reduce turnover

- Managed IT infrastructure and implemented maintenance schedules for VR hardware/software systems
