

My job title says Talent Acquisition — my work says developer. At [Ericsson](#) I identified friction in my own workflows and built the tools to fix them: a GUI-based document generator and a print automation CLI, both written in Python on my own initiative and used by me daily. My manager recognised the approach and has asked me to extend the concept for other team members. I also contribute to [DICE](#), an internal AI dashboard team, as a process and automation advisor. I have five years of context inside large tech organisations (Ericsson, Infineon, Bosch) — I understand what problems are worth solving and I build the tools to solve them. Now I want the title to match the work.

Projects & Built Tools

HR Contract Document Generator

PERSONAL · USED AT ERICSSON

A Python desktop application built on my own initiative to automate my own contract document workflow. A GUI collects the required data and auto-populates `{{token}}`-based templates, generating completed `.docx` and `.xls` files — replacing a fully manual process. My manager praised the result and has asked me to adapt the concept for other team members, which I am currently working on.

Print Automation CLI Tool

PERSONAL · USED AT ERICSSON

Built personally to eliminate repetitive manual steps in my daily print workflow. An interactive CMD interface guides the user through configurable print settings with input validation and error checking, then sends files to the network printing server with a real-time progress bar. Written entirely on my own initiative to solve a friction point in my day-to-day work.

DICE — AI Dashboard Team

ERICSSON · ACTIVE

Contributing as an outside process consultant to DICE, an internal Ericsson team that delivers business intelligence dashboards powered by Native AI. Analyse existing workflows, identify automation opportunities, and advise on team organisation and process design to help the team ship faster and more reliably. Involvement is manager-supported and cross-functional — working alongside engineers and product stakeholders outside my primary role.

Professional Experience

Talent Acquisition Operations Partner

Apr 2025 – Present

Ericsson · Budapest

- Agile Leadership & Project Governance (DICE Team): Personally requested by the Head of Program Office & Operations, leader of DICE AI Dashboard team to transition into an unofficial Scrum Master role for the Summer 2026 cycle. Entrusted with unblocking and guiding a cross-functional squad of 9 development interns by facilitating daily standups, managing 2-week sprint backlogs, and orchestrating end-of-sprint demo meetings for DICE team members
- Developed and deployed custom Python tools (GUI template engines and hálózati/CLI automation) on personal initiative to eliminate high-volume manual administrative bottlenecks
- Commissioned by senior management to scale internal software tools into robust, multi-user scripts for departmental deployment
- Partner with the internal DICE AI Dashboard project group as an automated workflow and operational process consultant
- Led cross-functional hiring initiatives and KPI reporting to senior management

Emerging Talent & University Relations Specialist

Apr 2024 – Apr 2025

Infineon Technologies · Cegléd / Budapest

- Autonomous owner of the Hungarian "Emerging Talent" strategy, managing the end-to-end selection, dual-education corporate rotations, and contracting processes
- Developed and executed advanced selection methodologies, including group-level Assessment Centers (AC) and large-scale tech event/job fair logistics
- Built and maintained a structured talent pipeline database using data-driven methods

HR Recruiter & HR Business Partner Intern

May 2022 – Apr 2024

Bosch · Budapest

- Applied Lean HR methodology to simplify and digitalise existing HR processes
- Analysed employee satisfaction data and developed action plans to reduce turnover

IT Maintenance Technician

Dec 2019 – Aug 2021

VR Vidámpark · Budapest

- Managed IT infrastructure and implemented maintenance schedules for VR hardware/software systems
- Performed end-to-end hardware troubleshooting, physical diagnostics, and component-level repairs on sensitive electronic equipment
- Conducted deep software troubleshooting on Windows hosts, including OS-level optimization, runtime environment fixes, and resolving system conflicts
- Analyzed and modified codebases of proprietary software and games to debug runtime issues, demonstrating strong software diagnostics and a problem-solving mindset

Education

MSc Business / Managerial Economics (*unfinished*)

Eötvös Loránd University · Budapest, 2024

BSc Human Resources Management & Services

Károli Gáspár University · Budapest, 2020–2024

Technical Specialist Year – Optic Fiber System Design and Installation

Puskás Tivadar

Távközlési Technikum · Budapest

2012–2016

Technical Secondary School
