

My job title says Talent Acquisition — **HR insider turned builder**. At **Ericsson** I automate the workflows I lived in: Universal HR HUB merges contract generation, vacation calculation, and print automation into a modular desktop platform with **human-in-the-loop** approval before documents ship. I also work with **DICE**, Ericsson's internal **Native AI** dashboard team — as process advisor and unofficial **Scrum Master**, facilitating sprints with mentor support and shadowing another squad through a full delivery workflow. Public proof on GitHub: **Flight Price Tracker** (FastAPI, Railway, Capacitor Android). Five years across Ericsson, Infineon, and Bosch give me the context; Python and AI-assisted development give me the execution. Seeking a junior developer or QA role where that combination matters.

Projects & Built Tools

Universal HR HUB — HR Document Factory **PERSONAL · USED AT ERICSSON**

The evolved merge of the contract generator and print workflows into a modular desktop platform. Multi-country JSON profiles, automatic `{{token}}` scanning, a no-code Tab Builder, addon architecture (print automation, vacation calculators), and bulk Word/Excel/PDF export — designed for **human-in-the-loop** steps: calculate, review, generate, approve, then print. Internal tool; portfolio includes an interactive workflow simulation.

DICE — Native AI Dashboard Team **NATIVE AI** **ERICSSON · ACTIVE**

DICE is Ericsson's internal squad building business intelligence dashboards on **Native AI**. Outside my core HR role, I serve as process advisor and unofficial Scrum Master: facilitating 2-week sprints with mentor support, mapping workflows, spotting automation opportunities, and shadowing another squad through a full delivery cycle alongside engineers and product owners.

HR Contract Document Generator

PERSONAL · USED AT ERICSSON

A Python desktop application built on my own initiative to automate my own contract document workflow. A GUI collects the required data and auto-populates `{{token}}`-based templates, generating completed `.docx` and `.xls` files — replacing a fully manual process. My manager praised the result and has asked me to adapt the concept for other team members. This was the original Hungary-focused tkinter prototype — now superseded by Universal HR HUB.

Print Automation CLI Tool

PERSONAL · USED AT ERICSSON

Built personally to eliminate repetitive manual steps in my daily print workflow. An interactive CMD interface guides the user through configurable print settings with input validation and error checking, then sends files to the network printing server with a real-time progress bar. The workflow was later integrated into Universal HR HUB as the Nyomtatás addon; the standalone CLI remains in reference scripts.

Budget Tracker Application

[↗ View on GitHub](#)

Full-featured Python budget app with custom spending categories, a transaction ledger (deposits, withdrawals, transfers), smart fund-checking guards, and ASCII spend visualisation charts. Demonstrates clean OOP design, data integrity logic, and formatted user-facing output.

Professional Experience

Talent Acquisition Operations Partner

Apr 2025 – Present

Ericsson · Budapest

- **Agile Leadership & Project Governance (DICE Team):** Personally requested by Olga Papp, Head of Program and DICE team lead, to serve as an unofficial **Scrum Master** for the **DICE Native AI** dashboard team — ongoing. Facilitating 2-week sprints for a squad of software engineering interns, daily standups, and sprint backlogs, with an assigned mentor and permission to shadow another team through a full delivery workflow from planning to demo.
- **Python Automation:** Developed and deployed custom Python tools (GUI template engines and CLI network automation) on personal initiative to eliminate high-volume manual administrative bottlenecks.
- Commissioned by senior management to scale internal software tools into robust, multi-user scripts for departmental deployment
- Partner with the internal **DICE Native AI** dashboard team as a workflow and operational process consultant
- Led cross-functional hiring initiatives and KPI reporting to senior management

Emerging Talent & University Relations Specialist

Apr 2024 – Apr 2025

Infineon Technologies · Cegléd / Budapest

- Autonomous owner of the Hungarian "Emerging Talent" strategy, managing the end-to-end selection, dual-education corporate rotations, and contracting processes
- Developed and executed advanced selection methodologies, including group-level Assessment Centers (AC) and large-scale tech event/job fair logistics
- Built and maintained a structured talent pipeline database using data-driven methods

HR Recruiter & HR Business Partner Intern

May 2022 – Apr 2024

Bosch · Budapest

- Applied Lean HR methodology to simplify and digitalise existing HR processes
- Analysed employee satisfaction data and developed action plans to reduce turnover

[VR Vidámpark](#) · Budapest

- Managed IT infrastructure and implemented maintenance schedules for VR hardware/software systems
- Performed end-to-end hardware troubleshooting, physical diagnostics, and component-level repairs on sensitive electronic equipment
- Conducted deep software troubleshooting on Windows hosts, including OS-level optimization, runtime environment fixes, and resolving system conflicts
- Analyzed and modified codebases of proprietary software and games to debug runtime issues, demonstrating strong software diagnostics and a problem-solving mindset

Education

MSc Business / Managerial Economics (*unfinished*)

Eötvös Loránd University · Budapest, 2024

BSc Human Resources Management & Services

Károli Gáspár University · Budapest, 2020–2024

Technical Specialist Year – Optic Fiber System Design and Installation

Puskás Tivadar Távközlési Technikum · Budapest (2012–2016)

Technical Secondary School

Puskás Tivadar Távközlési Technikum · Budapest (2012–2016)
